SUMMARY

Backend Software Engineer specializing in Python and FastAPI, shipping REST APIs and cloud-native services. Google Summer of Code 2025 contributor at FOSSology, where he rebuilt the backend as a Docker/Kubernetes microservices system, and a merged contributor to Jenkins core, the CI/CD platform used by engineering teams worldwide.

EXPERIENCE

9D Technologies

Backend Software Engineer | Aug 2026 – Present, Lahore, Pakistan

- Built an authentication service in FastAPI, covering request validation, error handling, and secure endpoint design.
- Developed REST API endpoints for a task management platform's reporting module, structuring data flows to automate report generation.
- Automated testing and deployment for backend services with CI/CD pipelines in GitHub Actions.

Google Summer of Code 2025

Software Engineer (Open Source) | Feb 2025 – Sep 2025, Remote

- Rebuilt FOSSology's backend as a 10+ service Docker/Kubernetes microservices architecture, replacing a single monolithic deployment.
- Migrated the build system from Make to CMake, cutting build time 40% and unblocking a CI pipeline that had been failing for the team.
- Root-caused and resolved a scheduler crash loop in the project's core service, tracing the issue through PostgreSQL schema limits, container networking, and init ordering.

Hywiz Technologies

Software Engineer Intern | May 2023 – Sep 2023

- Shipped full-stack product modules and REST APIs with React, Node.js, and Express.js, replacing manual daily data exports with MongoDB aggregation pipelines.

OPEN SOURCE CONTRIBUTIONS

Jenkins

Contributor – [jenkinsci/jenkins](#), [jenkinsci/docker](#), [jenkinsci/theme-manager-plugin](#)

- 5+ PRs merged covering accessibility, keyboard navigation, and Docker environment-variable substitution for Linux and Windows containers. [🔗](#)

FOSSology

Contributor – [fossology/fossology](#), [fossology/gsoc](#)

- 22+ PRs merged across the GSoC 2025 microservices infrastructure and the copyright, nomos, and cp2foss agents. [🔗](#)

OWASP Foundation

Collaborator – OWASP/Nest | Jan 2026 – Present

- Earned Collaborator access after identifying and helping resolve accessibility issues in keyboard focus indicators.

PROJECTS

Ezvor

React, TypeScript, Supabase, Gen AI, RAG [🔗](#)

- Built a full-stack SSR platform pairing a 3,977-problem auto-graded DSA arena with a Readiness Engine that converts verified coding activity into a recruiter-shareable proof score.

OpenTelemetry Pipeline for Jenkins CI

OpenTelemetry, Python, Jenkins, Jaeger, Prometheus [🔗](#)

- Built a 3-tier distributed telemetry pipeline with tail-based sampling, cutting observability data volume 81% while unifying Jenkins CI traces and metrics in Jaeger/Prometheus.

SKILLS

Languages

Python, JavaScript, TypeScript, C++

Backend

FastAPI, Node.js, Express.js, REST API Design, JWT, Socket.io, Git

Frontend

React, Tailwind CSS, HTML, CSS

Databases

MongoDB, PostgreSQL, MySQL, Redis

Infrastructure

Docker, Kubernetes, Microservices, Jenkins, Linux, GitHub Actions, Kustomize

Testing & QA

Manual & Regression Testing, JMeter, Postman, SQL Validation, Bug Tracking

AI & RAG

OpenAI API, LangChain, Embeddings, Prompt Engineering

EDUCATION

UNIVERSITY OF AGRICULTURE, FAISALABAD

Bachelor of Computer Science

CGPA: 3.37/4.0

2022 – 2026 (Graduated)

HONORS & AWARDS

Linux Foundation LIFT Scholar

Full scholarship, Kubernetes (LFD259) certification and exam
Jul 2025

Google Summer of Code 2025

Selected globally, sub-5% acceptance rate
Mar 2025

Byte & Battle Hackathon

1st place university-wide, 3rd place district-level
Mar 2025

PEEF Scholarship

80% fee scholarship, Government of Punjab
Jul 2022 – 2026

COURSEWORK

- Machine Learning
- Databases
- Data Structures & Algorithms
- Application Development
- Mobile Application Development
- Operating Systems
- Computer Vision
- Statistics
- Linear Algebra
- Computer Networks
